

MARKA-QOLOR's COVID-19 RESPONSE

Dear Valued Customer,

The spread of the coronavirus in every continent has placed challenges for all businesses in their supply chains. Quarantine and illness mean that many workers will be away from their places of work. Nonetheless, we understand the packaged goods value chain plays a critical social role, maintaining the safety and integrity of products. MARKA-QOLOR's manufacturing facilities support the packaging of many articles that are much needed in these difficult times.

As the COVID-19 pandemic continues to escalate, MARKA-QOLOR has taken measures in order to maintain our three manufacturing facilities operating at normal production output.

The measures we are taking, based on our current knowledge of this pandemic are:

- 1- The installation of touchless hand sanitizer dispensers at facility entrances.
- 2- A daily message at the beginning of each shift headed by our HR Coordinator promoting preventive practices at work and outside of work.
- 3- Mandatory usage of medical face masks (provided by Marka-Qolor).
- 4- Visual aids promoting no hand shaking or touching.
- 5- Visual aids promoting one (1) meter distancing between coworkers.
- 6- Two temperature readings of all employees using non-contact thermometers.
- 7- Installation of nine (9) Hepa Air purifiers.
- 8- Sending any employees that show symptoms to test for Covid-19 virus.

We will continue to keep our customers informed of any changes that might affect our delivery commitments.
